

# DILUCO™ SU-2650G

## Features & Benefits

- Excellent Release
- Superior Lubrication
- High Wetting Characteristics
- Does not interfere with painting or plating
- Minimum Buildup

**DILUCO™ SU-2650 G** is a high performance, polymer-based release agent to be used during the initial startup phase of the die casting process. Its blend of natural lubricants along with dispersed graphite helps prevent sticking during the first few shots of startup. It also assists with the lubrication of the ejector pins, slides, fins, and core areas.

### TYPICAL CHARACTERISTICS:

Form	Liquid
Color	Black
Odor	Slight
Specific Gravity	0.89

### Application:

This product is designed to be used as is and not diluted. Used with a sprav bottle applied to the mold surface.

\*These values are not intended for use in preparing specifications.

### Safety & Health:

Refer to the product Safety Data Sheet (SDS).
